“ Jake Miller uses San Carlos a new use of the 2008 Quatro Wave 63. The 2008 Quatro Wave boards are being greatly influenced by what our team of pro riders defines as the new standard in wavepools. Short lengths and more volume ask for the maximum of shape efficiency. Rockers, outlines and flow of these boards have thus been brought to a new level of perfection. ”

Limited Edition

wave twin fin

QUATRO

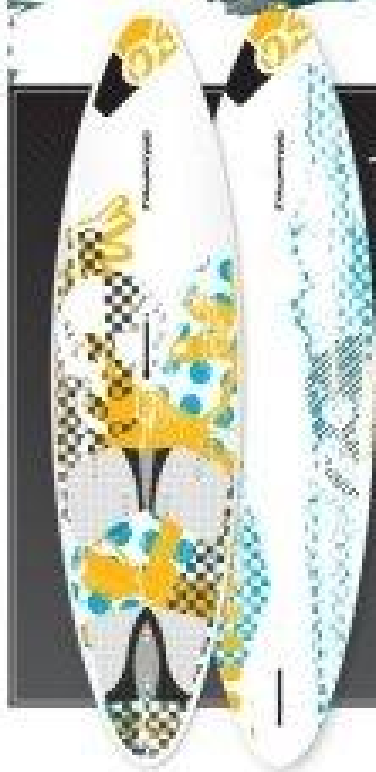

www.quatroboards.com

“ Keith Teboul in the pit at Teahupoo. Take on the Quatro Limited Edition Twin Fin Wave 63, 69 and 76. Keith Teboul has developed the all new Quatro Wave Twin Fin boards for 2008. They will be introduced with 63, 69 and 76 liter. Riding these boards is different to say the least. They allow you to finish your turns at the way, routing in a continuous motion from the bottom turn to the off the top, coming back at the white water and hitting it. You will feel a whole new sensation doing turns you've never done before.

Freestyle wave

QUATRO

www.quatroboards.com

“Eyal Shelef, cruising around Maui, Maui on the 2008 Quatro Freestyle Wave 105. The 2008 Quatro Freestyle Wave boards have been developed with Kailash and feature a fast rocker for immediate planing and a slight bend throughout the tail for those backward moves you love so much. Also, this bevel helps to do sweet and easy turns on smaller waves. The boards have gotten more compact, designed to be efficient on anything in between flat water aggressive...impressive jumps and new style wave shredding.”

Length	Volume	Weight	Volume	Weight
75	10.5	120	10.5	120
80	11.5	130	11.5	130
85	12.5	140	12.5	140

Freeride

QUATRO

www.quatroboards.com

“Eyal Shelef riding around Maui on the 2008 Quatro Freeride 100. We worked really hard on the 2008 Quatro Freeride boards, testing nearly 50 different boards on our hands on. The result is a board with awesome acceleration and excellent top speed at a medium length with a full rail and a super fast rocker.”

The bottom features an accelerating V that becomes more defined towards the tail, making the board extremely fast and allows you to fully control turns when jibs.
